

## ***Update - New solutions to overcome supply chain shortages***

Dear customers, dear partners

Since last December there have been many steps forward in the development of new solutions to overcome supply chain issues.

For various electronic components, which are not available anymore, there have been alternatives selected and tested. Some of them are already used in the actual WYLER products, without any influence on form, fit or function of the devices. For other electronic components WYLER can still profit from its own stock.

For the last time mentioned display module of the BlueLEVEL, an alternative display module has been selected. All engineering work and testing for that alternative display module is done, so that it could be used for future production. Interestingly also on the supply side there have been changes and the actual used display module is available again. Wyler has already now display modules secured for more than one year.

### **BlueLEVEL II**

The Bluetooth module OBS433, which is used in the BlueLEVEL since some years, is unfortunately still not available. Our frame contracts and orders for this Bluetooth module are still open and not fulfilled. So far there are also no fix promises from the suppliers, when the Bluetooth module will be delivered and in which quantity. We are sure it will come somewhen ...

The development of the BlueLEVEL II, with the newer Bluetooth module BT121, is still on track. The connection is working stable and we are now in an extensive testing phase. So far we are confident to keep our schedule that this solution will be ready for Q2/2022. By the way the Bluetooth module BT121 is already used in the wylerCONNECT and WYLER secured a large number of this Bluetooth module in its own stock.

The BlueLEVEL II will be fully compatible with the wylerCONNECT and the APP wylerUNIVERSAL. The software-applications, which can be downloaded via wylerSOFT – Info-Center, are also working as today with the wylerCONNECT.

The BlueLEVEL II cannot connect anymore, neither via Bluetooth nor cable, to the BlueMETER SIGMA and the BlueTC. Else the BlueLEVEL II is similar to the BlueLEVEL with the same functionality and the same measurement base types.

### **wylerPLOT**

wylerPLOT will be a new software-application, which offers among other things similar functionalities like the BlueMETER SIGMA. The development of this software-application was brought forward to support the launch of the BlueLEVEL II.

wylerPLOT works with the interface wylerCONNECT and will be part of wylerSOFT – Info-Center. Planned release date for wylerPLOT is Q2/2022, like the launch of the BlueLEVEL II.

wylerPLOT works via the wylerCONNECT also with the existing BlueLEVEL, the BlueLEVEL-2D, the wylerLEVEL family, the wylerCLINO family and the Clinotronic S.

wylерPLOT runs on a tablet with Windows 10 (or higher)

wylерPLOT runs on a laptop with Windows 10 (or higher)

More information on wylерPLOT will follow in March 2022.

WYLER will contact you for all your open BlueLEVEL orders. You will then have the possibility either to stay with your ordered BlueLEVEL or to switch to a BlueLEVEL II (and wylерPLOT).

WYLER will inform about the new solutions and the situation for the supply of the Bluetooth modules again in March 2022 or even earlier if the supply chain problems of the Bluetooth module would change.

Kind regards

Urs Kammacher
