

Important information from WYLER AG to our business partners

Winterthur, Switzerland

June 29, 2020

Dear friends and business partners

The Swiss government has recently further eased its measures taken under the exceptional circumstances relating to the Coronavirus pandemic, thus paving the way to "normality."

With this easing of restrictions, we have implemented the following measures:

- Shift operations that had been implemented as a precautionary measure were discontinued as of June 8, 2020, and normal operations resumed (See WYLER News of March 30, 2020).
- Guidelines for the strict adherence to the hygiene measures and compliance with distancing requirements remain in place.
- Visitor access to our site will remain at a minimum.
- Development of new products, technologies, and applications will continue to be advanced at full speed.

Uncertainty remains very high worldwide. In some major economies, the pandemic has yet to be brought under control. We are nonetheless confident that the global economy will increasingly recover in the coming months, provided that further pandemic waves, and their associated containment measures, do not occur.

Protecting the health of our employees while reliably serving our business partners remains important to us. Thank you for both your trust and your understanding.

We wish you, your families, and your staff all the best, and stay safe.

WYLER AG

Heinz Hinnen
CEO WYLER AG
