

## ***Update - New solutions to overcome supply chain shortages***

# ***Sales Start BlueSYSTEM II, BlueLEVEL II & wylerPLOT Temporary Sales Stop BlueLEVEL & Bluetooth® Upgrades***

### **Dear customers, dear partners**

Since Q3/2021, delivery bottlenecks have been emerging for the Bluetooth® modules for the inclinometers of the BlueSYSTEM. In order to counteract this supply chain bottlenecks and to maintain the ability to deliver, WYLER AG proactively decided to make an additional development effort. We have now achieved this ambitious goal and can present the BlueLEVEL II and the software application wylerPLOT.

### **Sales Start BlueLEVEL II (BlueSYSTEM II)**

WYLER announces the sales start of the BlueLEVEL II product line. The BlueLEVEL II, as part of the BlueSYSTEM II, can be ordered as of today. The first deliveries of the BlueLEVEL II will be from middle of May onwards.

The BlueLEVEL II is similar to the BlueLEVEL with the same functionality and the same measurement base types. The difference is that the BlueLEVEL II has another Bluetooth® module inside so that it can be delivered! The BlueLEVEL II will be fully compatible with the wylerCONNECT and the APP wylerUNIVERSAL. The further WYLER software-applications, like wylerSPEC, are also working with the BlueLEVEL II.

The BlueLEVEL II cannot connect anymore, neither via Bluetooth® nor cable, to the BlueMETER SIGMA and the BlueTC. Via the wylerCONNECT the BlueLEVEL II is fully compatible with the other electronic inclination measurement devices of the BlueSYSTEM Family.

The WYLER BlueSYSTEM II – BlueLEVEL II catalog can be downloaded from the WYLER webpage.

<https://www.wylerag.com/en/support/documentation/catalogue/catalogue/>

Prices of the BlueLEVEL II are the same as for the BlueLEVEL. A dedicated pricelist for the BlueLEVEL II is available on the WYLER PARTNERLINK.

### **Sales Start wylerPLOT**

WYLER announces the sales start of the software application wylerPLOT. It can be ordered as of today. The first deliveries of the software application wylerPLOT will be in the second half of May.

wylerPLOT runs on a tablet or on a laptop with Windows 10 (or higher)

wylerPLOT offers among other things similar functionalities like the BlueMETER SIGMA. The development of this software-application was brought forward to support the launch of the BlueLEVEL II. wylerPLOT works with the interface wylerCONNECT and will be part of wylerSOFT – Info-Center.

wylerPLOT connects via the wylerCONNECT also with the existing BlueLEVEL, the BlueLEVEL-2D, the wylerLEVEL family, the wylerCLINO family and the Clinotronic S. There will be full interoperability between the different electronic inclination devices from WYLER.

wylerPLOT, impressions from the GUI

More information is in the BlueLEVEL II catalog and on the WYLER website. Further information on the software application wylerPLOT will follow.

Pricing information of wylerPLOT is in the BlueLEVEL II pricelist on the PARTNERLINK.

### Temporary Sales Stop BlueLEVEL & Bluetooth Upgrades

Due to the shortage of the OBS433 Bluetooth® modules, that are used in the BlueLEVEL's, WYLER has to announce a temporary sales stop for the BlueLEVEL and for Bluetooth-Upgrades. This temporary sales stop will be valid as long as not enough OBS433 Bluetooth® modules are available.

WYLER will contact you for all your existing BlueLEVEL orders. You will then have the possibility to switch to BlueLEVEL II (and wylerPLOT) or to stay with your ordered BlueLEVEL (but with delayed delivery for an indefinite period).

WYLER will inform if the supply chain problems of the Bluetooth module would change.

Kind regards

Urs Kammacher  
Deputy Managing Director  
Head of Sales & Marketing
