

SOFTWARE LICENSING POLICY WYLER AG

1. Types of WYLER software licenses

1st license

A customer buying a license for a specific WYLER software for the first time is charged the price of a full / 1st license.

2nd license

If the same customer at the same location *) buys a 2nd (or higher) license of the same software he already purchased a 1st license, he will be charged the reduced / 2nd license price.

*) Customer must provide proof of the availability of a 1st license at that location.

Remark 1: 3rd, 4th and so on licenses are charged at the same price as the 2nd license

Volume licenses

Companies with a requirement of 10 licenses and more of a specific software can apply for a volume license agreement. Such an agreement must be signed by the corporation, WYLER and WYLER representative where applicable.

Under a Volume license all licenses at all locations within that company are at the reduced price of a 2nd license.

Upgrade

If a customer has an old version of a software *), WYLER may provide full licenses at a reduced / upgrade price (for details see current catalog).

*) Customer must provide proof of the availability of a valid license of the old version

Function-upgrade

If a customer would like to extend the functionality of a software *), WYLER may provide full licenses for the extended software at a reduced / upgrade price (for details see current catalog).

*) Customer must provide proof of the availability of a valid license of the current software version

2. End user transparency

A regular update of firmware and software is necessary to ensure best possible functionality of both the software as well as the interface. The licensing process with wylerCONNECT therefore requires a 1:1 assignment of a license to a specific end-user.

Hence, a purchase order for a software license must include name and address of the end-user. Administrative communication and logistical handling of all software orders however are identical to standard hardware orders (see also next page).

Administrative and logistic handling of software licenses

New licenses

New licenses are stored in a wylerCONNECT and delivered as part of that hardware.

Upgrades / Function-extensions / purchase of new licenses to an existing license

For changes to existing licenses, even if no hardware is sent, the communication (quotation / purchase order / payment / delivery of license) is always handled the same way, as if hardware would be involved:

- for direct customers (e.g. in Switzerland) delivery is directly to end-user
- for customers in areas assigned to a WYLER representative, the delivery is always through the respective representative
